

7 BEST WORDPRESS PLUGINS (+ 2 BONUS PLUGINS!)

CHECKLIST

■ CUSTOM PERMALINKS

Change permalinks to anything you want, without restriction from the default WordPress URL hierarchy.

■ DISQUS

Replace the default WordPress commenting system with a more user-friendly (and pretty) version.

■ FAVICON BY REALFAVICONGENERATOR

Easily set your site's favicon & other icons with this simple tool that configures everything for you.

■ REDIRECTION

Redirect URLs with ease.

■ RELEVANSSI

Replace the default WordPress search engine with one that is smarter & supports partial matching.

■ DISABLE EMOJIS

Prevent WordPress from automatically making text smileys like this :) into this 😊

■ WP MAINTENANCE MODE

Easily toggle a "maintenance mode" landing page for when you're working on your live site.

BONUS PLUGINS!

■ BUSTED!

Prevent users from seeing a cached version of your site after you've made changes and want them to see the updated version. Provides peace of mind that your users are seeing the correct version of your site and not some wonky combination of old and new. The best bit: no configuration necessary!

While this plugin hasn't been updated in awhile, I use it with no issues.

■ ENABLE MEDIA REPLACE

Allows you to replace an image in your media library without having to go through the process of deleting the old version and re-uploading. A serious time saver that prevents a cluttered media library comprised of random outdated variations of images.
